

In which locations is there evidence? What impacts does it document? Since when has there been evidence?

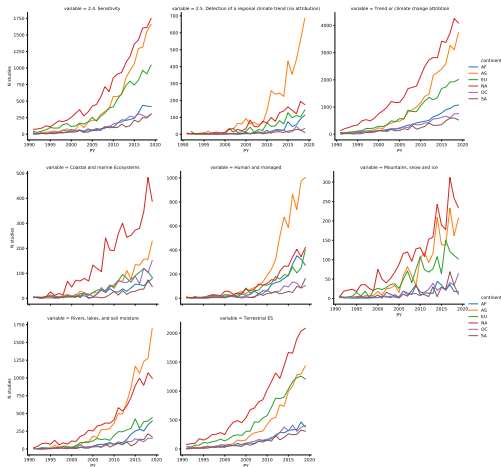

- More studies on Asia than North America since 2018
- Africa now more frequently studied than South America and Oceania

- Lots of the new studies on Asia have been about Detection (is there a regional climate trend?)

- Lots of the new studies on Asia have been about Detection (is there a regional climate trend?)
- There is also more literature on human impacts and the water cycle in Asia

- Lots of the new studies on Asia have been about Detection (is there a regional climate trend?)
- There is also more literature on human impacts and the water cycle in Asia
- On human impacts, Africa is as much studied as anywhere apart from Asia
